

Project Design Phase-II Technology Stack (Architecture & Stack)

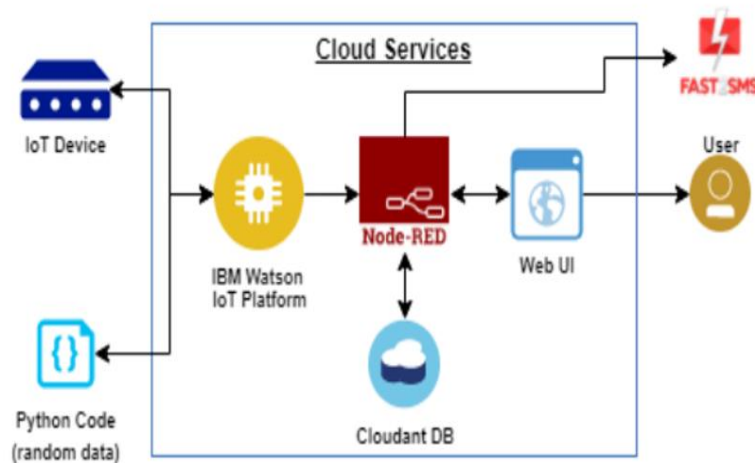

Date	20 October 2022
Team ID	PNT2022TMID53571
Project Name	Gas Leakage Monitoring & Alerting System
Maximum Marks	4 Marks

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Example: Order processing during pandemics for offline mode

Reference: <https://developer.ibm.com/patterns/ai-powered-backend-system-for-order-processing-during-pandemics/>

Guidelines:

1. Include all the processes (As an application logic / Technology Block)
2. Provide infrastructural demarcation (Local / Cloud)
3. Indicate external interfaces (third party API's etc.)
4. Indicate Data Storage components / services
5. Indicate interface to machine learning models (if applicable)

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	How user interacts with application e.g. Web UI, Mobile App, Chatbot etc.	HTML, CSS, JavaScript / Angular Js / React Js etc.
2.	Application Logic-1	Logic for a process in the application	Java / Python
3.	Application Logic-2	Logic for a process in the application	IBM Watson STT service
4.	Application Logic-3	Logic for a process in the application	IBM Watson Assistant
5.	Database	Data Type, Configurations etc.	MySQL, NoSQL, etc.
6.	Cloud Database	Database Service on Cloud	IBM DB2, IBM Cloudant etc.
7.	File Storage	File storage requirements	IBM Block Storage or Other Storage Service or Local Filesystem
8.	External API-1	Purpose of External API used in the application	IBM Weather API, etc.

9.	FAST SMS	Delivery of millions of sms at a time	TDMA , GSM , Internet ,SMTP etc.
----	----------	---------------------------------------	----------------------------------

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	Python	PyCharm , Webstorm
2.	Security Implementations	To secure the users login credentials and personal information	IBM Watson IOT platform
3.	Availability	The availability of application (e.g., use of loadbalancers, distributed servers etc.)	IBM Cloud load balancer
4.	Performance	To increase the performance the application in hosted in the high-performance instance	IBM instance
